

What makes the
Damon System
different?

Better results
in **less time**

Passive self-ligating braces that eliminate the need for elastic or metal "ties".

High technology wires that move teeth faster and require fewer adjustments.

A new **clinically proven treatment approach** that aligns your teeth and enhances your facial aesthetics – usually without extractions or rapid palatal expanders.

With the Damon System, treatment time is typically shorter than with conventional braces. And shorter treatment time means fewer appointments and a beautiful smile...faster. You may be surprised at how fast.

Treatment time: 14 months, 7 appointments

**Beautiful smiles
and beautiful faces**

**Outstanding
comfort**

With the Damon System we can treat most cases without extractions. No one likes to have teeth removed, and a smile with a full display of teeth often produces a broader, natural smile and a nicer profile.

The days of having braces tightened are over. Damon System braces have a unique slide mechanism that reduces pressure on your teeth and allows them to move more comfortably to their correct positions. This revolutionary new approach to orthodontics ensures greater comfort throughout treatment.

Treatment time: 16 months, 10 appointments

Breakthrough
Technology

Straight teeth and a beautiful smile can enhance self-esteem and self-confidence at any age, plus improve overall oral health. Ask your orthodontist how you can benefit from the Damon System. It's never too late to look and feel great.

Damon self-ligating system

Damon System braces use a unique slide mechanism that minimizes the friction and binding of conventional braces. With the Damon System teeth align more quickly and comfortably.

Treatment time: **18 months, 11 appointments**
